

Mintty 3.4.0 cheat sheet

Scrollback and selection

Shift + Up arrow / Down arrow	Line up / down
Shift + Page Up / Down	Page up / down
Shift + Home	Top
Shift + End	Bottom
Alt + F3	Search
Shift + Left arrow	Go to previous scroll marker (e.g. in prompt)
Shift + Right arrow	Go to next scroll marker (e.g. in prompt)
Shift + Num 5	Enter keyboard selection mode
In keyboard selecting mode, following shortcuts can be used:	
Alt	Set rectangular selection
Up arrow / Down arrow	Modify selection
Page Up / Down or Home or End	Scroll / Modify selection
Alt + Num 5	Restart rectangular selection
Insert or Enter	Copy selection and exit selection mode
Del or Esc	Exit selection mode

Copy and paste

Ctrl + Insert	Copy
Shift + Insert	Paste
Ctrl + Shift + Insert	Copy and paste

Window

Alt + F2	New (clone window at current size)
Shift + Alt + F2	New (clone window at configured size)
Alt + F3	Search (in scrollback buffer)
Alt + F4	Close
Alt + F8	Reset
Alt + F10	Default terminal size (rows / columns)
Shift + Alt + F10	Default terminal size (rows /

	columns) and font size
Alt + F11 or Alt + Enter	Toggle full screen
Shift + Alt + F11 or Shift + Alt + Enter	Toggle full screen and zoom font
Alt + F12	Flip screen
Alt + Space	Window menu
Ctrl + Tab	Next visible window (as sorted by creation time)
Ctrl + Shift + Tab	Previous visible window (as sorted by creation time)
Ctrl + Ctrl + Tab	Next window (as sorted by creation time)
Ctrl + Ctrl + Shift + Tab	Previous window (as sorted by creation time)
Ctrl + Alt + Left click + Move the mouse	Move window

Multi-monitor selection

Alt + F2	(or user-defined "new" key as defined with option KeyFunctions) will only spawn a new window after F2 has been released. While the key is being held, the target monitor can be selected with a sequence of numeric keypad keys:
Num 8 or Num 2 or Num 4 or Num 6	Navigate the target focus to the respective neighbour in the monitor grid
Num 7 or Num 9 or Num 1 or Num 3	Combine two directions respectively
Num 5	Set the target focus to the Windows "primary" monitor
Num 0 or numDel	Reset focus to the current monitor

Note: Note that a heuristic algorithm is used, based on the size of the smallest monitor attached to the system, so the target may not always be selected as expected if multiple monitors of different size are available or monitors are not arranged in a regular grid.

Font zoom

[Customize this PDF...](#)

Ctrl + Num +	Zoom font in
Ctrl + Num -	Zoom font out
Ctrl + Shift + Num +	Zoom font and window in
Ctrl + Shift + Num -	Zoom font and window out
Ctrl + 0	Back to configured font size

Ctrl + Shift + Letter shortcuts

Ctrl + Shift + A	Select all
Ctrl + Shift + C	Copy
Ctrl + Shift + V	Paste
Ctrl + Shift + N	New
Ctrl + Shift + H	Search scrollback buffer
Ctrl + Shift + W	Close
Ctrl + Shift + R	Reset
Ctrl + Shift + D	Default terminal size (rows / columns)
Ctrl + Shift + F	Full screen (not zooming font despite Shift)
Ctrl + Shift + S	Flip screen
Ctrl + Shift + O	Toggle scrollbar
Ctrl + Shift + P	Cycle pointer styles
Ctrl + Shift + T	Cycle or tune transparency levels

Ctrl + Shift + T cycles through transparency levels in steps, whenever the keys are released. Alternatively, while holding down Ctrl + Shift + T, the navigation keys on the numeric keypad can be used for further fine-tuning:

Use up / down to increase / decrease, Page Up / Page Down for steps, Del / Insert for no / max transparency, End for highest preconfigured transparency, Home for previous value.

If OpaqueWhenFocused is set, opaqueness is temporarily disabled to provide visible feedback for the changes.
