

Anvil cheat sheet

Form editor

These shortcuts are available in Design and Code view.

Ctrl + Shift + F	Search all code in the app
Ctrl + Enter	Save and run the app
Ctrl + S	Save the app. Note that this also happens automatically, you don't need to save manually unless you want to specify a custom commit message
Ctrl + Z	Undo the latest change
Ctrl + Y or Ctrl + Shift + Z	Redo the latest reverted change
Ctrl + C	Copy the currently selected component(s) or code
Ctrl + X	Cut the currently selected component(s) or code
Ctrl + V	Paste the cut/copied components or code into the selected container or at the cursor

Design view

Del or Backspace	Delete the currently selected components
Ctrl + Left click + Move the mouse	Resize column with fine-grained control

Code view

Ctrl + F	Search the current file. Hit enter repeatedly to find subsequent matches
Ctrl + G	Find next. Repeats previous search
Ctrl + Shift + G	Find previous. Repeats previous search backwards
Ctrl + H	Replace occurrences of a particular string in the current file one by one
Ctrl + Shift + H	Replace all occurrences of a particular string in the current file
Ctrl + I	Reindent the code to match your tabsize preference

Ctrl + Q	Expand/collapse currently selected block of code
Ctrl + /	Comment/uncomment a line or block of code
Ctrl + Left click	Click on a function to jump to its definition
Ctrl + Left click	Click on a variable to jump to its definition

Data tables

Del or Backspace	Delete the currently selected row(s) or column(s), or set the currently selected cell value to None
Arrow keys	Move between cells
Enter	Edit the currently selected cell, or move to the cell below if already editing
Tab	Move to the cell on the right
Esc	Clear the current selection
