

Atom (Windows) cheat sheet

Frequently used shortcuts

Ctrl + ,	Open the Preferences/Settings view
Shift + Ctrl + P	Open & closes the command palette
Ctrl + P	Open the Fuzzy Finder palette in which you can search and open files
Ctrl + Shift + L	Select the language the file is in
Ctrl + \	Toggle Atom's file Tree View
Alt + Ctrl + R	Reload the Editor
Ctrl + Alt + I	Open the Chrome Developer Tools/Console

Editing

Ctrl + Shift + K	Delete the current line
Ctrl + Up arrow	Move the contents of the current cursor position up one line. If there is a line above with content, the current lines content will swap with the one above it
Ctrl + F	Open the Find/Replace panel
Ctrl + Shift + F	Open the Find in Project Panel
Ctrl + L	Select the entire line the cursor's current position is in
Ctrl + /	Toggle the selected text into a comment of the current grammar
Ctrl + Alt + Up arrow / Down arrow	Allows to select multiple rows, where the same edit will be applied
Ctrl + D	If you select a word, and then hit the key combo for this command, Atom will select the next same word for you. Then you can either type directly (which will replace the old words) or use left or right arrow to append things.
Alt + F3	This shortcut is similar to Cmd + D / Ctrl + D but it selects all the matching words at once
Ctrl + K then Ctrl + [0 - 9]	Fold/Unfold at a specific indentation level where the number is the indentation depth

Managing windows

Ctrl + S	Save the currently active file
Ctrl + W	Close active tab

All shortcuts

These shortcuts can also be found on File > Settings > Keybindings.
