

DeepL Translator (Windows) cheat sheet

Global

These shortcuts work in any app when the DeepL software is working.

Ctrl + C then Ctrl + C	(hold Ctrl, press C twice) Translate
------------------------	---

Customization note: The second part of this shortcut can be changed. The first part must be Ctrl + C. This option is found in Settings > Second button ("Ctrl+C and then...") > DeepL Shortcut. The new shortcut will need to contain at least one modifier (Ctrl, Alt or Shift).

Ctrl + F9	Translate in original context
-----------	-------------------------------

Ctrl + Win + C	Translate your writing in your editing app
----------------	--
