

# NvChad cheat sheet

## Editor

To edit opened file, you need to switch to INSERT mode. This can be done by pressing Insert key.

In the insert mode, these shortcuts can be used to move the cursor:

Ctrl + B	Go to the beginning of the line
Ctrl + E	Go to the end of the line
Ctrl + H	Move one character to the left
Ctrl + L	Move one character to the right
Ctrl + J	Go to the next line
Ctrl + K	Go to the previous line

## Text selection:

To select text via keyboard, you need to enter VISUAL mode. To do this, first exit the insert mode by pressing Esc.

Once you place the cursor at the beginning of the part we want to select, we use the keys CTRL + v to enter the V-BLOC (Visual Block) mode.

Now moving with the cursor we will see that our selection will be highlighted.

Y	Copy selection to the clipboard
D	Delete selection

Text search:

/	then type "/search key" : Search
/ + Enter	Move to next match
? + Enter	Move to previous match

When you finished searching, the highlight can be removed by the command Shift + :noh (no highlight).

Saving the document:

First press Esc to exit INSERT mode then press Shift + :w to save file with the current name.

To save with different name, use the following command:

```
:w /path/to/new/file_or_position
```

To save and quit, use Shift + :wq (write and quit).
