/ or ?	Single frame advance while paused
F	Fast Forward (playback at 250% normal speed while F key is pressed)
[	Decrease volume
]	Increase volume

Default key mappings for SDL-Input

The SDL-Input plugin contains an auto-configuration function which will provide default joystick mappings for any recognized joystick. If there is no supported joystick connected, the input plugin will enable a default keyboard control mapping, as given below:

Arrow keys	Analog Pad
Right Ctrl + Arrow keys	Move analog pad 50% slower
Right Shift + Arrow keys	Move analog pad 25% slower
Right Ctrl + Right Shift + Arrow keys	Move analog pad 75% slower

Note: When using the arrow keys on the keyboard, the analog stick is normally moved by its full range. To make smaller moves, hold the Right Ctrl (for -50%) or Right Shift key (-25%) or both (-75%).

I	C Up
---	------

J	C Left
K	C Down
L	C Right
W/A/S/D	DPad Up/Left/Down/Right
Z	Z trigger
X	Left trigger
C	Right trigger
Enter	Start
Left Shift	A button
Left Ctrl	B button
,	Select Mempack
.	Select Rumblepack
