Some interesting things about the Copy, Cut, and Paste functions is that they do not just apply to text. If you copy an object, like a text frame, image frame, or

shape for example, you can then paste these on another page, and it will be placed with the same X-Pos, Y-pos it had in the original location. You can also use graphics inside a body of text, something called inline graphics, if you paste while in Edit Contents mode in the text frame. Weirder still is that you can copy/cut and paste a text frame that might include inline graphics as inline graphics itself.
