

dbForge SQL Complete cheat sheet

General

Up arrow	Move one item forward in the list of suggestions
Down arrow	Move one item back in the list of suggestions
Page Up	Scroll the list one page forward at a time
Page Down	Scroll the list one page backward at a time
Enter	Insert a highlighted suggestion into code
Esc	Closes the suggestion box without inserting any suggestion into code. If the suggestion box and/or parameter information hint is shown, the first pressing of Esc will close the hint first
Ctrl	Turn on the semi-transparent mode for the suggestion box and the parameter info hint
Ctrl + Space	Open the suggestion box
Ctrl + Shift + Space	Show the hint with the info parameter for functions
Ctrl + K then D	Enables to format the entire document
Ctrl + K then F	Enables to format a selected code fragment
Ctrl + K then E	Enables execution of the current statement
Ctrl + Shift + F10	Enables to execute SQL code located above the current cursor position
F12	Enables to go to definition
Ctrl + Shift + R	Enables to refresh local cache
Ctrl + B then C	Insert missing semicolons in the code
F2	Upon renaming an object, opens the Preview Changes - Rename dialog window to preview changes in the code
Ctrl + F10	Enables execution of current statement to cursor
Ctrl + Alt + H	Open the Execution History window

Alt + Z Restore the last closed document

Ctrl + F12 Script object as CREATE/ALTER
