]	Cycle forward between navigation tabs
[	Cycle backwards between navigation tabs

Search Operators

filetype: — Returns only search results that match a particular file extension, for example: us census 1860 filetype:pdf. The filetypes available in Kagi Search come from anonymized queries of the available Google filetypes and Bing filetypes. (Bing does not provide a filetypes list.)

site: — Returns only search results from a particular website, for example: best in show dog site:akc.org

inurl: — Finds webpages whose URL includes a term of phrase, for example: best headphones inurl:forum

intitle: — Finds webpages whose title includes a term of phrase, for example: chess intitle:books

"words" — Finds the exact words in a phrase, for example: "survival is insufficient"

() — Finds or excludes webpages that contain a group of words, examples below

AND — Finds webpages that contain all the terms or phrases, for example: sweaters (christmas AND ugly)

+ and - — Finds webpages that contain or exclude a term or phrase, for example: food +cat -dog

OR — Finds webpages that contain either of the terms or phrases, for example: recipes (szechuan OR cantonese)

* — Matches any word, for example: best * ever

Query Shortcuts & Widgets

!bang — Use Kagi bangs, for example you can use !r to directly search reddit: !r han shot first

\query or query ! — Opens the first result of the search, for example: \tommy westphall universe hypothesis or outfit movie !

!k — Bang that performs a standard Kagi Web search, for example !k benefits of ice baths. This can be useful if you are on the Images, Videos, News, or Maps tabs and want to do a Web search without changing tabs.

!i — Bang that performs a Kagi Image search, for example: !i webb telescope photos

!v — Bang that performs a Kagi Video search, for example: !v emmanuel don't do it

!n — Bang that performs a Kagi News search, for example: !n apple

!m — Bang that performs a Kagi Maps search, for example: !m eiffel tower

calc — Opens a widget that can perform math calculations, unit conversions, and currency conversions, for example: calc. The widget opens automatically when you search for a calculation, like (45 * 2) / (5 + 10).

ip address — Check your IP address by searching for ip address

timer / stopwatch — Search for timer or stopwatch to see a widget with those functions

translate — Open a language translation widget by searching for translate
