Waze Map Editor cheat sheet

General

F	Move the cursor to the search box
? or Shift + / or Shift + - or Shift + ~ or Shift + ù	Show the keyboard shortcuts
Ctrl + S or Cmd + S	Save edits
Del	Delete the single selected object (segment, junction, landmark). To delete multiple objects, you must click the trash can icon and confirm the multiple delete.
Esc	Deselect all objects
Alt + Shift + R or Option + Shift + R	Reload all layers (refreshes map without using a permalink; preserves the chat window)

Drawing

I	Draw (insert) a new Road/Segment (equivalent to clicking Road under the draw road icon)
O	Draw a new Roundabout (equivalent to clicking Roundabout under the draw road icon)

Editing Segments

D	Delete a geometry node from a road segment while hovering the cursor over it during road geometry editing
E	When one or more segments are selected, activates Edit mode (shortcut for clicking the Edit button)
H	When a segment is selected, activates House Number mode (shortcut for clicking the Edit House Numbers button)
M	Toggle multi-select mode. Default behavior is that to select multiple segments, you must use the modifier key to multi-select. When toggled active, multi-select mode lets you select multiple segments without using the modifier key.
R	Toggle segment direction between 1-way (A->B), 1-way (B->A), and 2-way while updating road details. See road direction for more information.
T	When one or more segments are selected, activates Restrictions mode(shortcut for clicking the Add/Edit Restrictions button) - mnemonic Time-restrict
Ctrl + A or Cmd + A	Select Entire Street - mnemonic Select All
Ctrl + Z or Cmd + Z	Undo
Ctrl + Shift + Y or Cmd + Shift + Y or Ctrl + Shift + Z or Cmd + Shift + Z	Redo
Ctrl + Up arrow or Cmd + Up arrow	Increase elevation of selected segments (if all elevations are the same)
Ctrl + Down arrow or Cmd + Down arrow	Decrease elevation of selected segments (if all elevations are the same)

Junctions and arrows

A	Toggle connection arrows between transparent or opaque so you can see beneath them and click items under them. Often times editors will hit the A key by mistake and then wonder why turn arrows cannot be selected. Some editors use this as their default setting to avoid making Unwanted changes to turns by mistake and deactivate only when they want to restrict/allow turns.
Q	Disable all connections for the selected junction which makes the turn arrows all red for that selected junction

S	Toggles separation of connection arrows so they do not overlap to ease clicking on either
W	Allow all connections for the selected junction which makes the turn arrows all green for that selected junction. Note that this key will only enable all turns that had not previously been automatically enabled by the Waze routing server, called soft allowed turns. The soft allowed turns have a higher penalty than turns enabled by the editor. Therefore since soft and editor allowed turns have the same color green, if it is known that all turns are enabled at a particular intersection, it is better to first force all turns to disabled with the Q key and then press the W key to force them all to editor enabled.
Shift + Z	Toggles display of disallowed connections (turns) for every segment/node in the view. When active, no green arrows are shown

Display and layers

Shift + A	Toggle Area Managers layer
Shift + C	Toggle Cities layer
Shift + D	Toggle No Name segment highlighting
Shift + E	Toggle Editable areas layer
Shift + F	Toggle Full Screen mode
Shift + G	Toggle GPS points layer
Shift + I	Toggle Satellite Imagery layer
Shift + L	Toggle Landmarks layer
Shift + V	Toggle Live users layer
Shift + P	Toggle (map) Problems layer
Shift + R	Toggle Roads layer
Shift + S	Toggle (speed) Cameras layer
Shift + U	Toggle Update requests layer
Alt + C	Toggle Chat window

Alt + Shift + R	Reload layers
Shift + Up arrow	Zoom the map in one level
Shift + Down arrow	Zoom the map out one level
Arrow keys	pan the map in all four directions
Shift + Left click or Double click	Re-center the map on at the clicked location and zooms in one level
Shift + Left click + Move the mouse	Draw a temporary rectangle and zoom into that portion of the map
