

# Kibana cheat sheet

## General editing

|                                |                                                                         |
|--------------------------------|-------------------------------------------------------------------------|
| Cmd + I                        | Auto indent current request                                             |
| Ctrl + Space                   | Open Auto complete (even if not typing)                                 |
| Cmd + Enter                    | Submit request                                                          |
| Cmd + Up arrow /<br>Down arrow | Jump to the previous/next<br>request start or end                       |
| Cmd + Alt + L                  | Collapse/expand current scope                                           |
| Cmd + Option + 0               | Collapse all scopes but the<br>current one. Expand by adding a<br>shift |

## When auto-complete is visible

|              |                                                                                 |
|--------------|---------------------------------------------------------------------------------|
| Down arrow   | Switch focus to auto-complete<br>menu. Use arrows to further<br>select a term   |
| Enter or Tab | Select the currently selected or<br>the top most term in auto-<br>complete menu |
| Esc          | Close auto-complete menu                                                        |
